This network enables Doosan Infracore America to aggressively compete in this competitive market. The lift truck product line impressively comprises of 63 different models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these various vehicle designs range from 3,000 to 33,000 lbs. All vehicles are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest emerging forklift and lift truck corporation in the North American market, thanks to its outstanding level of product performance and their persistently high level of buyer support and service given to all Doosan Infracore Forklift clients. The U.S. lift Truck division situated in Cleveland has a expert team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Originally the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled lift trucks as part of a home-based equipment expansion venture. Sales of these goods were initially targeted to state-run companies, large scale corporations, and the armed forces. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical instruction grew to become the new focus for enhancing quality and product development.

Daewoo started the first domestic lift truck business in 1967, and rapidly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological enhancements combined with sales success placed them in a position of significant growth of their lift truck operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling market. This joint-venture proved highly lucrative for Daewoo and their forklift sales expanded greatly. In 1984, the company finished development of a new facility to help in producing high end value-added products for export. In 1993, the company had a global sales network and started exporting designs they had developed through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth possibilities into international markets.
